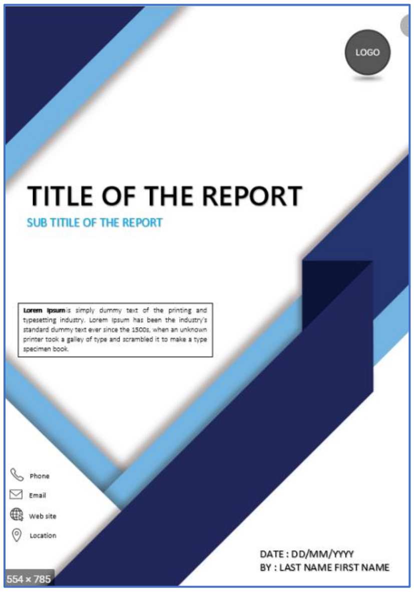
Final Project Document Structure

1. Work document cover/title page



LOGO

TITLE OF THE REPORT

SUB TITLE OF THE REPORT

Lorem Ipsum is simply dummy text of the printing and typesetting industry. Lorem Ipsum has been the industry's standard dummy text ever since the 1500s, when an unknown printer took a galley of type and scrambled it to make a type specimen book.

CONTENTS

TABLES iii
FIGURES iv

1.0 INTRODUCTION 1
2.0 DESIGN PROJECT BACKGROUND 2
2.1 Problem Definition 2
2.2 Needs Analysis 3
2.3 Key Performance and Environmental Requirements 4
2.4 Deliverables 5
2.4.1 *Firmware Code* 5
2.4.2 *Hardware* 5
2.4.3 *Report* 5
3.0 SYSTEM DESIGN 6
3.1 On- & Off-Board Design 6
3.2 Functional Block Descriptions 8
3.3 Hardware Implementation 8
3.4 Linear Testing 10
3.4.1 *Gain Error* 10
3.4.2 *Offset Error* 11
3.4.3 *Differential Non-Linearity* 12
3.4.4 *Integral Non-Linearity* 13
3.4.5 *Total Unadjusted Error* 14
3.4.6 *Missing Codes* 15
3.5 Dynamic Testing 15
3.5.1 *The FFT* 16
3.5.2 *Total Harmonic Distortion* 18
3.5.3 *Signal-To-Noise Ratio* 18
3.5.4 *Spurious Free Dynamic Range* 19
3.5.5 *Two Tone Intermodulation Distortion* 20
3.5.6 *Effective Number of Bits* 20
4.0 USER INTERFACE 20
5.0 RISK REDUCTION 21
6.0 PROTOTYPE COST 21
7.0 TEST PLAN 22
8.0 PROJECT SCHEDULE 22
9.0 CONCLUSION 23

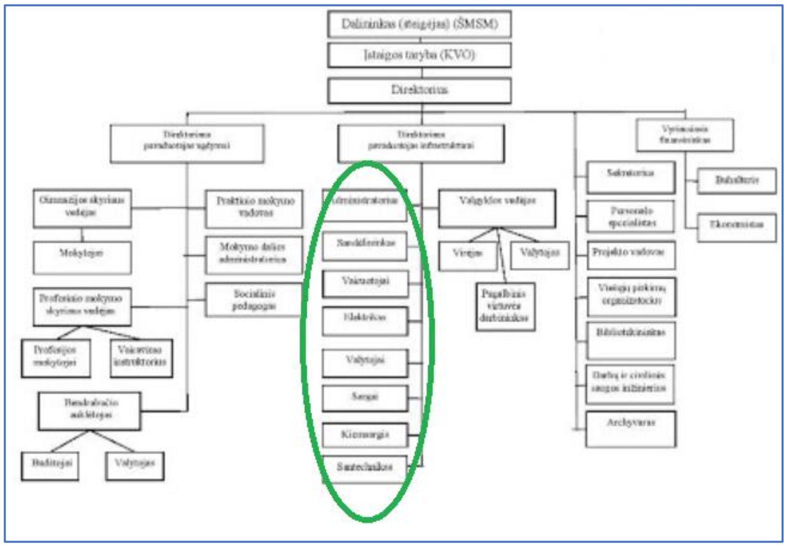
3. Document Purpose

Present the purpose of the document and the work. Just few sentences.

4. Testing section

Present the section, which would be tested. It can be presented by:

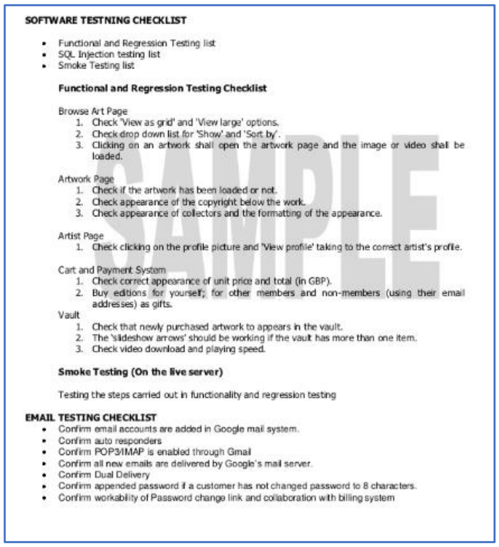
- Providing a description of that section;
- Poviding some diagram of the page or system with a marked section, which will be tested;



- Or maybe combined version – description and a diagram;
- Or some other way…

5. Testing checklist(s)

- It can be displayed in marked list (word format);
- It can be lisplayed in a table (word table, excel table);
- It can be a screenshot(s) from other testing tools (TestRail, Backlog);
- It can be displayed with the screenshot(s) of the area for which it is specified;
- It can be displayed in some specified groups or functionality sections;



SOFTWARE TESTNING CHECKLIST

- Functional and Regression Testing list
- SQL Injection testing list
- Smoke Testing list

Functional and Regression Testing Checklist

Browse Art Page

1. Check 'View as grid' and 'View large' options.
2. Check drop down list for 'Show' and 'Sort by'.
3. Clicking on an artwork shall open the artwork page and the image or video shall be loaded.

Artwork Page

1. Check if the artwork has been loaded or not.
2. Check appearance of the copyright below the work.
3. Check appearance of collectors and the formatting of the appearance.

Artist Page

1. Check clicking on the profile picture and 'View profile' taking to the correct artist's profile.

Cart and Payment System

1. Check correct appearance of unit price and total (in GBP).
2. Buy editions for yourself; for other members and non-members (using their email addresses) as gifts.

Vault

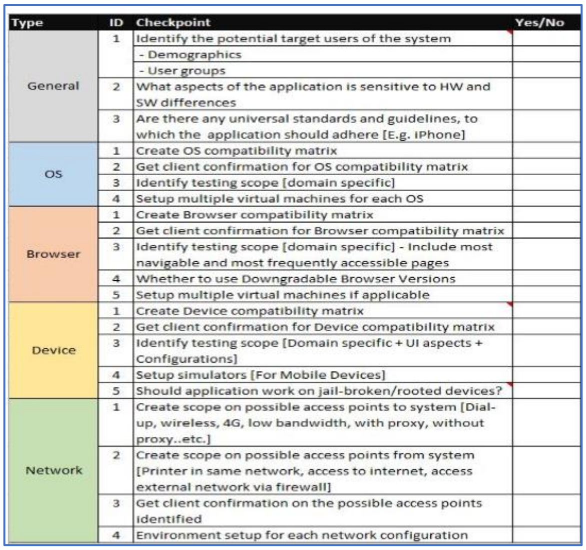
1. Check that newly purchased artwork to appears in the vault.
2. The 'slideshow arrows' should be working if the vault has more than one item.
3. Check video download and playing speed.

Smoke Testing (On the live server)

Testing the steps carried out in functionality and regression testing

EMAIL TESTING CHECKLIST

- Confirm email accounts are added in Google mail system.
- Confirm auto responders
- Confirm POP3/IMAP is enabled through Gmail
- Confirm all new emails are delivered by Google's mail server.
- Confirm Dual Delivery
- Confirm appended password if a customer has not changed password to 8 characters.
- Confirm workability of Password change link and collaboration with billing system

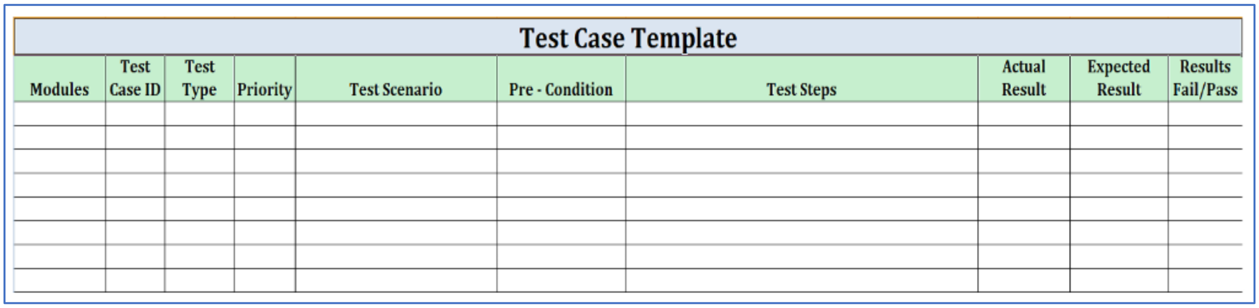


Type	ID	Checkpoint	Yes/No
General	1	Identify the potential target users of the system	
		- Demographics	
		- User groups	
	2	What aspects of the application is sensitive to HW and SW differences	
	3	Are there any universal standards and guidelines, to which the application should adhere [E.g. iPhone]	
OS	1	Create OS compatibility matrix	
	2	Get client confirmation for OS compatibility matrix	
	3	Identify testing scope [domain specific]	
	4	Setup multiple virtual machines for each OS	
Browser	1	Create Browser compatibility matrix	
	2	Get client confirmation for Browser compatibility matrix	
	3	Identify testing scope [domain specific] - Include most navigable and most frequently accessible pages	
	4	Whether to use Downgradable Browser Versions	
	5	Setup multiple virtual machines if applicable	
Device	1	Create Device compatibility matrix	
	2	Get client confirmation for Device compatibility matrix	
	3	Identify testing scope [Domain specific + UI aspects + Configurations]	
	4	Setup simulators [For Mobile Devices]	
	5	Should application work on jail-broken/rooted devices?	
Network	1	Create scope on possible access points to system [Dial-up, wireless, 4G, low bandwidth, with proxy, without proxy..etc.]	
	2	Create scope on possible access points from system [Printer in same network, access to internet, access external network via firewall]	
	3	Get client confirmation on the possible access points identified	
	4	Environment setup for each network configuration	

6. Detailed test cases

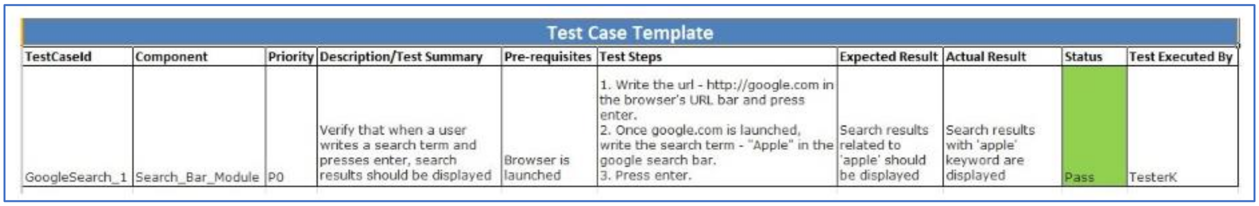
From your checklist select most important sections and provide detailed test cases, which will be used for these sections testing.

- Test cases can be displayed in tables (word or excel);
- Test cases can be displayed as screenshots from your used testing tools (TestRail, Backlog);



Test Case Template

Modules	Test Case ID	Test Type	Priority	Test Scenario	Pre - Condition	Test Steps	Actual Result	Expected Result	Results Fail/Pass



Test Case Template

TestCaseId	Component	Priority	Description/Test Summary	Pre-requisites	Test Steps	Expected Result	Actual Result	Status	Test Executed By
GoogleSearch_1	Search_Bar_Module	P0	Verify that when a user writes a search term and presses enter, search results should be displayed	Browser is launched	1. Write the url - http://google.com in the browser's URL bar and press enter. 2. Once google.com is launched, write the search term - "Apple" in the google search bar. 3. Press enter.	Search results related to 'apple' should be displayed	Search results with 'apple' keyword are displayed	Pass	TesterK

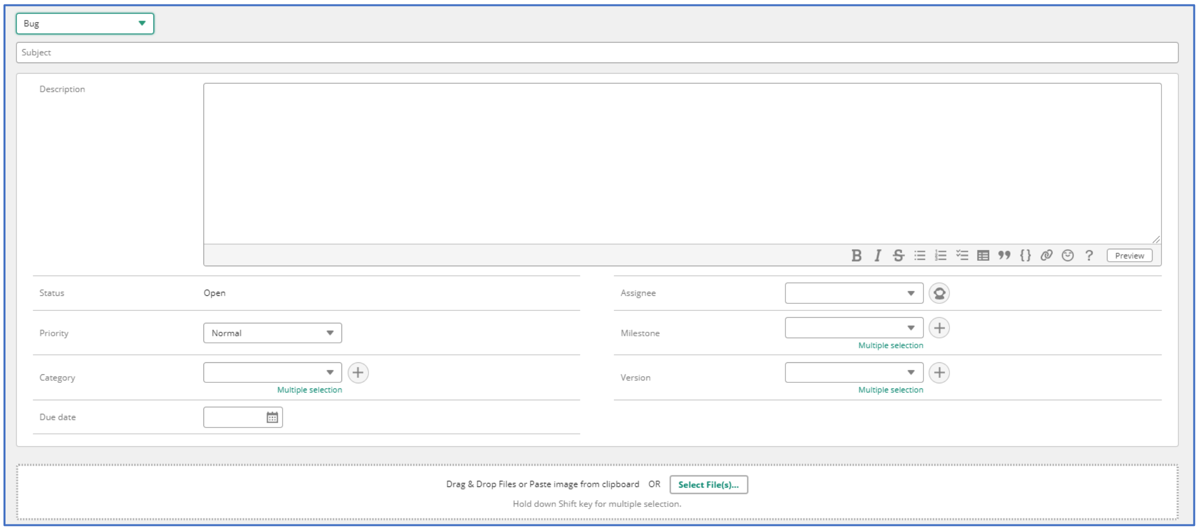
7. Founded issues/bugs

List all the findings, which you are inclined to keep as bugs. If you find more then one, please group them:

- UI bugs;
- Functionality bugs;
- Performance bugs;
- Security bugs;
- Or some other groups.

Bugs as other items can be presented in different ways, but don‘t forget to list all the needed points, which are specified as required ones.

I would like to get them as screenshots, which would be made from our used tool:



Bug

Drag & Drop Files or Paste image from clipboard OR Select File(s)...
Hold down Shift key for multiple selection.

8. Improvements

If you noticed that some sections, which are already implemented, works but something is wrong (for examle – complex UI, complex functionality or any other points, which could be improved), please provide ideas how it could be updated.

9. Test Design Techniques

List all testing techniques, which you used during your testing.

10. Reflection

It should be a short description of your work:

- what were executed by you without any difficulties;
- and which parts of the work caused the issues and why.
